

Appendix 2: Full list of authors' declarations of interests

Pre-screening

All panel members were pre-screened for conflicts of interest prior to the guideline process that resulted in the *BMJ* Rapid Recommendations. The pre-screening was performed by the RapidRecs Executive team from the non-profit organisation MAGIC (www.magicproject.org) with support and approval from at least two unconflicted *BMJ* editors. No financial conflicts of interest were allowed (specifically, no financial ties to pharmaceutical companies with any stake in HIV care) and intellectual and professional conflicts of interest were managed appropriately (see appendix 3: Methods for *BMJ* Rapid Recommendations). Panel members could not have a conflict for the past three years and do not anticipate a conflict arising in the foreseeable future, which we defined as at least one year.

We excluded an additional 17 potential panel members, who had expressed interest. These experts had not formally disclosed any financial conflicts in recent publications, but did not meet the *BMJ* Rapid Recommendation standards for conflicts of interest.

Disclosures

Financial disclosures: No panel members had any financial conflicts of interest to disclose related to this clinical question.

Professional disclosures: Many of the panel members routinely prescribe antiretroviral therapy to people living with HIV, including pregnant women. No other professional conflicts of interest to disclose.

Intellectual disclosures: Reed Siemieniuk, Gordon Guyatt, Olufunmilayo Lesi, Jennifer Cohn, Jinell Mah Ming, Per Vandvik, Susan Bewley, and Lyubov Lytvyn participated in the writing of at least one of the complementary systematic reviews that formed the evidence base for this guideline. Graham Taylor

chaired the British HIV Association guidelines for the management of HIV infection in pregnant women, including the 2012 version and 2014 update. No other panel member has previously formally opined on antiretroviral choice for pregnant women living with HIV. Reed Siemieniuk, Arnaud Merglen, Thomas Agoritsas, Per Vandvik, and Gordon Guyatt are members of the GRADE Working Group: BMJ Rapid Recommendations adheres to GRADE methods. No panel member had any other intellectual conflict to disclose.
